

Business Requirement Document (BRD)

Project Name: AI-Powered Digital Jewellery Catalogue Platform

Version: 1.1 – Updated Strategic Scope

Date: 03 March 2026

Document Status: Approved for Phase 1 Development

1. Executive Summary

This project aims to develop a comprehensive AI-powered digital jewellery catalogue platform that showcases an extensive range of gold jewellery designs. The platform will function purely as a design discovery and AI-driven customization system. Online purchase, delivery, and checkout functionalities are out of scope for Phase 1.

2. Business Vision

To build the most intelligent jewellery design discovery platform in the region, combining tradition, trust, and artificial intelligence.

3. Business Objectives

- Primary Objectives:
 - Digitize traditional jewellery business
 - Increase physical store footfall
 - Build strong digital brand presence
 - Capture qualified buyer leads
 - Differentiate from competitors using AI
- Secondary Objectives:
 - Understand customer preferences through analytics
 - Enable repeat engagement
 - Prepare foundation for scalable expansion

4. Scope Definition (Phase 1)

- In Scope:
 - Large-scale digital jewellery catalogue (10,000+ designs scalable)
 - Advanced filtering and search functionality
 - Wishlist and sharing capability
 - WhatsApp enquiry integration
 - Appointment booking system
 - AI-powered conversational jewellery assistant
 - AI-based recommendation and customization engine
- Out of Scope:
 - Online payments

- Shopping cart checkout
- Delivery logistics
- Order tracking
- Real-time stock deduction

5. Target Audience

- Brides and wedding families
- Local jewellery buyers
- High-intent gold shoppers
- Tech-savvy customers
- NRI families planning purchases in India

6. Functional Requirements

- Catalogue Management:
 - Admin can create, edit, delete product entries
 - Unique Design ID per product
 - Multiple high-resolution images per product
 - Tag-based categorization system
 - Manual gold rate update capability
- Discovery & Filtering:
 - Filter by category, price, weight, purity, occasion, style
 - Keyword search functionality
 - Wishlist and sharing
- AI Features:
 - Conversational AI interface
 - LLM-based query understanding
 - Vector-based design recommendation
 - Customization suggestion capability
- Lead Capture:
 - WhatsApp enquiry integration

- Appointment booking system
- Admin dashboard for lead tracking

7. Non-Functional Requirements

Performance: Page load < 3 seconds, AI response < 5 seconds

Scalability: Architecture scalable to 100,000+ designs

Security: HTTPS, Admin authentication, Secure data storage

SEO: Optimized URLs, Metadata, Structured schema

8. Technical Architecture (High-Level)

Frontend: Next.js

Backend: Node.js API Layer

Database: PostgreSQL

Search: Elasticsearch or Vector Database

AI Layer: LLM Integration with Embeddings

Storage: Cloud Image Storage (S3 / Cloudinary)

9. Success Metrics (KPIs)

- Monthly website visitors
- AI interaction rate
- Wishlist saves
- Appointment bookings
- WhatsApp enquiries
- In-store conversion ratio

10. Strategic Direction

The platform should be architected to begin as a single-store AI-powered catalogue but remain scalable to evolve into a multi-store discovery platform or AI jewellery SaaS solution.
